ABOUT ME

QA Automation Engineer with 10+ years of experience and a Master's in Software Engineering and Technology. Deeply passionate about Software Quality and test automation — I've built QA departments from the ground up, defined quality strategies, and led teams across international and multicultural environments.

QA leadership at 4 companies · 5,000+ automated tests scaled in production · 8+ public talks & podcast appearances · Open-source contributor (Penpot)

Currently contributing to the QA team at Kaleidos (Penpot), an open-source design and collaboration platform. My current focus is Playwright with TypeScript and agentic, AI-assisted engineering — building custom AI skills and workflows to make testing and development faster. I actively contribute to open source projects and share knowledge through talks, workshops and blog posts.

- 10+ years in QA, with experience building and leading QA teams from scratch
- Skilled with Playwright, Cypress, Selenium WebDriver and Appium
- Speaker and community contributor — talks, workshops and podcast appearances
- ISTQB® Foundation Level (CTFL) certified
- First Certificate in English (FCE) — strong communicator across international teams

While I'm not actively job hunting, I'm always happy to connect with international, remote-first teams that need strong QA foundations — especially companies building or scaling a QA function from scratch, which is where I thrive.

WORK EXPERIENCE

QA Automation Engineer · Kaleidos (Penpot) · Remote

July 2025 – Present

Contributing to the QA team at Kaleidos for [Penpot](#), the leading open-source design and collaboration platform, within a flat, non-hierarchical organization — no team at Kaleidos uses formal "lead" titles, so scope here comes from ownership and initiative rather than hierarchy. Working closely with engineers to improve product reliability through both manual and automated testing, and building quality practices into the development workflow from the ground up.

- Designing and executing manual test cases and test plans — functional testing including regression, smoke and exploratory testing — across different operating systems and browsers
- Building E2E tests with Playwright across the product, including Stripe payment integration flows with time-travel/clock manipulation to validate subscription and billing scenarios

- Maintaining GitHub Actions and CI pipelines for daily scheduled automated test runs, reviewing daily test reports and fixing tests broken by upstream changes
- Detecting bugs and tracking them in Taiga and GitHub issues, defining severity and priority and providing support through to resolution
- Mentoring team members and contributing to technical and process documentation
- Practicing agentic, AI-assisted development as an increasingly core part of the daily workflow — using tools like Claude Code, GitHub Copilot and opencode
- Building custom AI skills and workflows to automate repetitive QA tasks and speed up test creation
- Prioritizing open-source AI models where possible, keeping tooling choices transparent and beneficial for the whole team

Technologies: Playwright, TypeScript, JavaScript, Node, GitHub Actions, Qase, Taiga, Clojure, Claude Code, GitHub Copilot, opencode, Stripe.

Head of QA · Genially · Remote

January 2020 – May 2025

Led the QA function at Genially as Head of QA, defining and owning the entire quality strategy for an interactive content platform used by millions worldwide. Reported directly to the CTO and worked across the full Technology department — from individual squads to company-wide quality culture.

- Built and led a team of 4 QA Engineers, coordinating their work across multiple product squads
- Designed and evolved the automation stack end-to-end: test frameworks, CI/CD pipelines, dashboards, alerting and reporting — scaling to ~5,000 automated tests running in ~40 minutes across 20 parallel workers
- Designed and built an internal QA API that provisioned test users on the fly via API/backend calls — pre-loaded with the exact account type, license and content state each test needed — cutting setup to a single login request and keeping the suite fast as it grew
- Built E2E tests for Stripe-based payment flows, including time-travel/clock manipulation to validate subscription renewals and billing edge cases
- Defined QA metrics and KPIs to track quality trends and support data-driven decision making
- Drove a culture of quality across the company, aligning QA with product, engineering and business goals
- Supported Genially's international growth, ensuring quality standards scaled with the product
- Introduced AI-assisted development into the QA workflow, using GitHub Copilot, Cursor and Claude to speed up Cypress test creation and streamline the CI pipelines

Technologies: Cypress, TypeScript, JavaScript, Node, React Testing Library, Python, Groovy, Jenkins, Declarative Pipelines, K8S, Grafana, TestRail, GitHub Copilot, Cursor, Claude, Stripe.

QA Automation Engineer · YouCanBook.Me · Remote

April 2019 – December 2020

Joined a small, fully remote team to build the QA practice from scratch. Defined the company's QA strategy, established processes, and created the CI/CD infrastructure using Docker, Terraform and AWS CodeBuild.

- Designed and implemented E2E and API automated test suites
- Set up the full CI/CD pipeline for test execution from the ground up

Technologies: Cypress, Selenium, JavaScript, Java, React Testing Library, TestNG, JUnit, Maven, Postman, AWS CodeBuild, CodePipeline, Terraform, Jira, TestRail.

Head of QA / DevOps · SDOS · Seville

June 2017 – April 2019

Created the QA Department from scratch at SDOS, a software consultancy working with major Spanish brands. Defined the QA strategy, built and led a team of 7, and architected the CI/CD model using Jenkins and Docker across multiple simultaneous client projects.

- Designed and built the Selenium and Appium automation core used across all SDOS projects
- Established the CI/CD structure for Android and QA pipelines using Jenkins Declarative Pipelines
- Led QA on featured projects for El Corte Inglés, Inditex, Prisa Group and CCMA

Technologies: Selenium, Appium, Java, Jenkins, Docker, Kubernetes, Sonar, Artifactory/Nexus, TestNG, JUnit, JMeter, MobSF, Wiremock, Jenkinsfile, Jira, TestRail.

Senior QA Engineer · Ontech Advanced Technology · Seville

February 2017 – June 2017

Worked on the Wardiam Pro project, an IoT alarm system. Designed and executed functional tests for software, hardware and firmware across the full range of Wardiam devices (Center, Sensor, Camera, Hooter and Tag). Also contributed to I+D projects based on Controlled Magnetic Fields (CMF) technology.

Technologies: TestLink, Redmine, Microchip.

Senior QA Engineer / QA Lead · Emergya Ingeniería S.L. · Seville

June 2016 – January 2017

Led QA efforts on the izi.TRAVEL project. Created and maintained manual, automation and responsive test plans. Developed automated tests in Java using Selenium WebDriver, with remote execution via SauceLabs. Implemented Continuous Integration with Jenkins and Docker, and Performance Testing with JMeter.

Technologies: Selenium WebDriver, Java, Jenkins, Maven, TestNG, SauceLabs, JMeter, Docker, TestRail, Jira.

Junior QA Engineer · Atos Global · Seville

February 2015 – June 2016

Worked on BlueKiwi, an Enterprise Social Networking platform. Developed automated regression tests in Java using Selenium WebDriver, set up CI deployments with Jenkins, and maintained test plans and issue tracking in Jira. Agile methodology: Scrum.

Technologies: Selenium WebDriver, Java, Jenkins, Jira.

QA Assistant · Admiral Group Ltd (Balumba y Qualitas Auto) · Seville

June 2014 – December 2014

First QA role — contributed to the Motorcycles project, a new line of business for Admiral Spain. Developed automated tests in Java using Selenium WebDriver with Oracle database access. Set up CI deployments using Jenkins and documented test results for the development team.

Technologies: Selenium WebDriver, Java, JUnit, TestNG, TestLink, Jenkins.

EDUCATION

Master in Software Engineering and Technology

University of Seville · 2013 – 2014

Postgraduate programme focused on advanced software engineering practices, software architecture, project management and quality assurance methodologies.

Technical Engineer of Computer Science Management

University of Córdoba · 2005 – 2012

Degree covering software development, systems administration, databases, networks and computer management. Included an Erasmus exchange year in the Czech Republic.

Erasmus Scholarship

VŠB – Technical University of Ostrava, Czech Republic · 2011 – 2012

Exchange programme at the Faculty of Electrical Engineering and Computer Science.

CERTIFICATIONS & ADDITIONAL TRAINING

Certification	Institution	Date
ISTQB® Foundation Level (CTFL)	ISTQB – International Software Testing Qualifications Board	July 2018
Advanced Kubernetes Training (20h)	Bitnami	May 2018
Scrum Master Certification (ID 15465)	Scrum Manager	November 2017
Cambridge English First (FCE)	Cambridge University	January 2014

PERSONAL PROJECTS

Penpot QA (Open Source)

Active contributor to the QA automation suite of Penpot, the leading open-source design and collaboration platform. Contributing E2E tests with Playwright and TypeScript.

Technologies: Playwright, TypeScript, GitHub Actions.

Playwright Template

Production-ready Playwright template with Page Object Model, API testing, GitHub Actions CI/CD, Qase integration and SonarCloud.

Technologies: Playwright, TypeScript, Node, GitHub Actions, Qase, SonarCloud.

Cypress Template

Production-ready Cypress template for E2E and API testing with Page Object Model, GitHub Actions CI/CD, Qase and SonarCloud.

Technologies: Cypress, TypeScript, Node, GitHub Actions, Qase, SonarCloud.

Appium Native Java Example

Maven project for running automated tests on iOS and Android using Appium.

Technologies: Appium, Java, Maven, iOS, Android.

Selenium Cucumber Project

Selenium WebDriver integrated with Cucumber for BDD-style automation in Java. Multi-browser/OS support, predefined steps library, and SonarQube.

Technologies: Selenium WebDriver, Cucumber, Java, TestNG, JUnit, Maven, SonarQube, Docker.

Una QA en Apuros (Blog)

Personal blog about Software Quality and test automation, publishing articles since 2017. Covers Playwright, Selenium, Appium, CI/CD and quality culture.
